# RuleBook

## Streamline Your File Inspections

RuleBook is a powerful Windows UWP application designed to simplify text file inspections. RuleBook's focus on text file inspections and its user-friendly interface make it a specialized tool for businesses that need to automate and streamline their file evaluation processes. RuleBook stands out by offering customized features that improve the efficiency and precision of text file inspections.

### FEATURES:

#### Automated Testing

RuleBook allows you to set up automated tests for multiple text files, ensuring they meet user-defined criteria. Test results are displayed in a clear, color-coded format, and files are organized into "Pass" and "Fail" folders based on the outcomes.

#### Customizable Rules

Create, import, and manage rules based on a user-defined lookup table. Each rule is tailored to your needs, allowing for precise control over what gets tested.

#### Comprehensive Reporting

Generate detailed reports of test sessions, including file names, directory paths, unit IDs, and test outcomes. Export these reports for easy sharing and documentation.

#### Easy Integration

Seamlessly import and export lookup tables and group codes to and from RuleBook, ensuring consistent and accurate testing across multiple systems.

#### Intuitive Interface

The application has a clean and straightforward interface, making it easy to navigate and use without a steep learning curve.
