

Ionix Aerosol Static Suppressor for comprehensive static control

***IGT aerosol makes
preventing random
static ignitions EASY!***

***Tinted BLUE for easy
visual inspection
Available to spray to -20F!
(Low Temperature Formulation)***

FAST

Have workers make a 3 second spray on any surface before they begin work and exterior static is gone!

EASIER TO USE THAN RAGS OR FILM WRAP

Hand wrapping rags or film is a labor intensive process. What could be simpler than spraying a surface? If it's wet there's no static. Workers don't have to ground or keep anything wet.

VERSATILE

Rags and film wrap are inconvenient or impossible to use in many situations where dangerous static might be present. Spray IGT Aerosol into cuts, taps, inside large diameter pipe, on tools or down keyholes to eliminate static. Our aerosol is tinted blue so workers can easily see where they've sprayed. Our aerosol is also formulated so you can use it to temperatures as low as -20F.

LAB TESTED SAFE FOR USE ON PE PIPE

GTI Lab tests independently confirm the IGT Aerosol Static Suppressor will not affect PE pipe or your fusing.

A SAFETY POLICY WORKERS CAN EASILY COMPLY WITH

Like everyone else, workers take the path of least resistance. When it's 40 degrees outside, what worker wants to wrap wet rags or film? If your workers can use an aerosol they can eliminate exterior static!

A 3 second spray keeps static away!

Ionix Aerosol Reach Tool for dissipating exterior static from a safe distance!

SAFER THAN RAGS OR FILM WRAP

Rags and film wrap require your workers to be in dangerous proximity to static electricity and a possible ignition. Our IGT Aerosol Reach Tool allows them to dissipate static from a safe distance. Using the IGT Aerosol Reach Tool they don't even have to enter the pit.

FASTER THAN RAGS OR FILM WRAP

The IGT Aerosol Reach Tool allows you to spray our IGT Aerosol Static Suppressor onto surfaces without having to hand wrap rags or film. The spray is actuated by a nylon trigger cord. The tool uses any common pole extender (wood or plastic recommended) available at any home improvement store.

EASIER THAN RAGS OR FILM WRAP

Our Aerosol can spray upside down and reach under the pipe using our Reach Tool. The black neck swivels 160 degrees from the yellow handle and the position is secured with a tongue and groove hinge with a wing nut bolt fastener.

MORE VERSATILE THAN RAGS OR FILM

The IGT Aerosol Reach Tool can allow workers to safely dissipate static in a wide range of operations that rag or film wrap cannot be used. Workers can remotely spray the IGT Aerosol down keyholes or onto squeezoffs which cannot be reached for wrapping.

IGT Aerosol Reach Tool is individually packaged.

Extender pole and IGT Aerosol not included

Specify Regular Temperature Formulation (sprays to 32F)

or Low Temperature Formulation (sprays to -20F)
